

# Port entrance lantern Type 421

Lantern intended for use in harsh environments. The LED technology enables low energy consumption with high luminous intensity, long life cycle and almost maintenance-free operation. The compact and stable construction is particularly noteworthy. The casing is made of water-resistant aluminium and the lenses of UV-resistant, impact-resistant polycarbonate.

The lantern is equipped with 256 programmable codes and integrated twilight switch.

To increase the range or to regulate traffic, several rings can be stacked.

Used as a navigation lantern for fixed navigation signs to mark port entrances and maritime obstacles.
